

Running Autopkgtests on a package

First, make sure that you have a container ready for the matching series:

```
autopkgtest-build-lxd ubuntu:focal
# the development release is only on the dailiy servers
autopkgtest-build-lxd ubuntu-daily:hirsute
```

Then we run the test with the built package:

```
autopkgtest --shell-fail -U --apt-pocket=proposed ../build-area/${PWD##*/}*_changes -- lxd
autopkgtest/ubuntu/groovy/amd64
```
